

A ~~New~~ ACS Bulk Data Transfer Service for CTA

Mauricio Araya, Leonardo Pizarro, Horst von Brand,
Marcelo Jara, Rodolfo Castillo, Igor Oya, Etienne Lyard

Data Acquisition is Different in CTA

- Monte-Carlo Simulations
 - Maximum readout of 80 Gb/s
- Approximately 5 Gb/s x Camera (compression)
 - Need a highly-performant **bulk-data transfer service**

camera type	goal rate	data rate
LST	15.0 kHz	27.8 Gb/s
MST-NectarCAM	9.0 kHz	32.7 Gb/s
MST-FlashCAM	9.0 kHz	4.4 Gb/s
SST-2M-G	0.6 kHz	2.0 Gb/s
SST-2M-AS	0.6 kHz	0.07 Gb/s
SST-1M-DG	0.6 kHz	0.34 Gb/s
SCT	2.5 kHz	28.3 Gb/s

Site	Trigger Rate for Hadrons (Hz)	LST/event	MST/event	SST/event	SCT/event
CTA-South	39941	0.5421*	1.8260	0.6149	0.6523
CTA-North	17017	1.1895*	2.2048	-	-

Telescope type	Pixels per camera	Window (ns)	Samples (per ns)	Bytes/sample	Bytes for header	Bytes/pixel
LST	1855	30	1	4	5	125
MST-NectarCAM	1855	60	1	4	5	245
MST-FlashCAM	1764	60	0.25	2	5	35
SST-2M-G	2048	100	1	2	5	205
SST-2M-AS	2048	N/A	N/A	N/A	N/A	7
SST-1M-DG	1300	100	0.25	2	5	55
SCT	11328	60	1	2	5	125

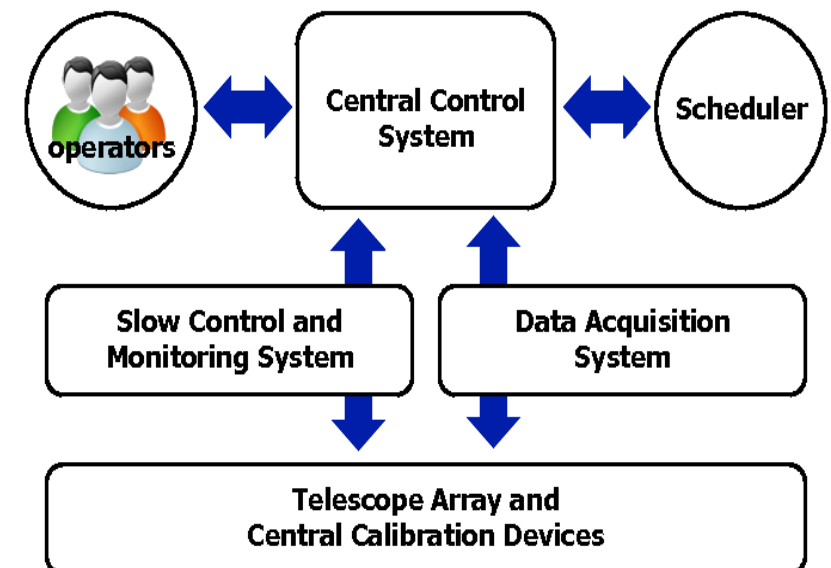

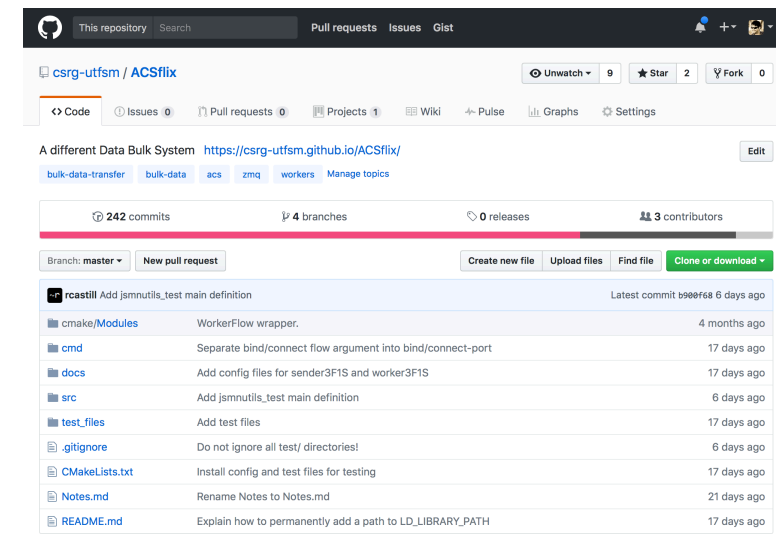

Bulk-Data Transfer Service (BDT)

- ALMA's BDT-NG service
 - Based on DDS
 - Proprietary (RTI)
 - Tailored for ALMA
- ACS Community Branch
 - No Open Source Implementation
 - CORBA-based one is deprecated
 - But IDL is defined and agreed

Bulk-Data Transfer using 0MQ (BDT-Z)

- Highlights
 - Open-source alternative for CTA
 - Independent and ACS API
 - DAQ can focus on serialization
- Implemented in C++ using 0MQ
 - **Data Transfer:** Push-pull pattern
 - **Data Control:** Publisher-subscriber

Performance

- Bulk Data Transfer
 - **Throughput** (bps) is the key
 - But not at all cost!
 - We want CPU usage to be reasonable
 - Load depends on generated **msg/s**
 - We can vary the packet size

- Dummy data over Ethernet

Performance

- Dummy data over Ethernet

- Image data over Ethernet

Dummy Data: 1-1 via Ethernet

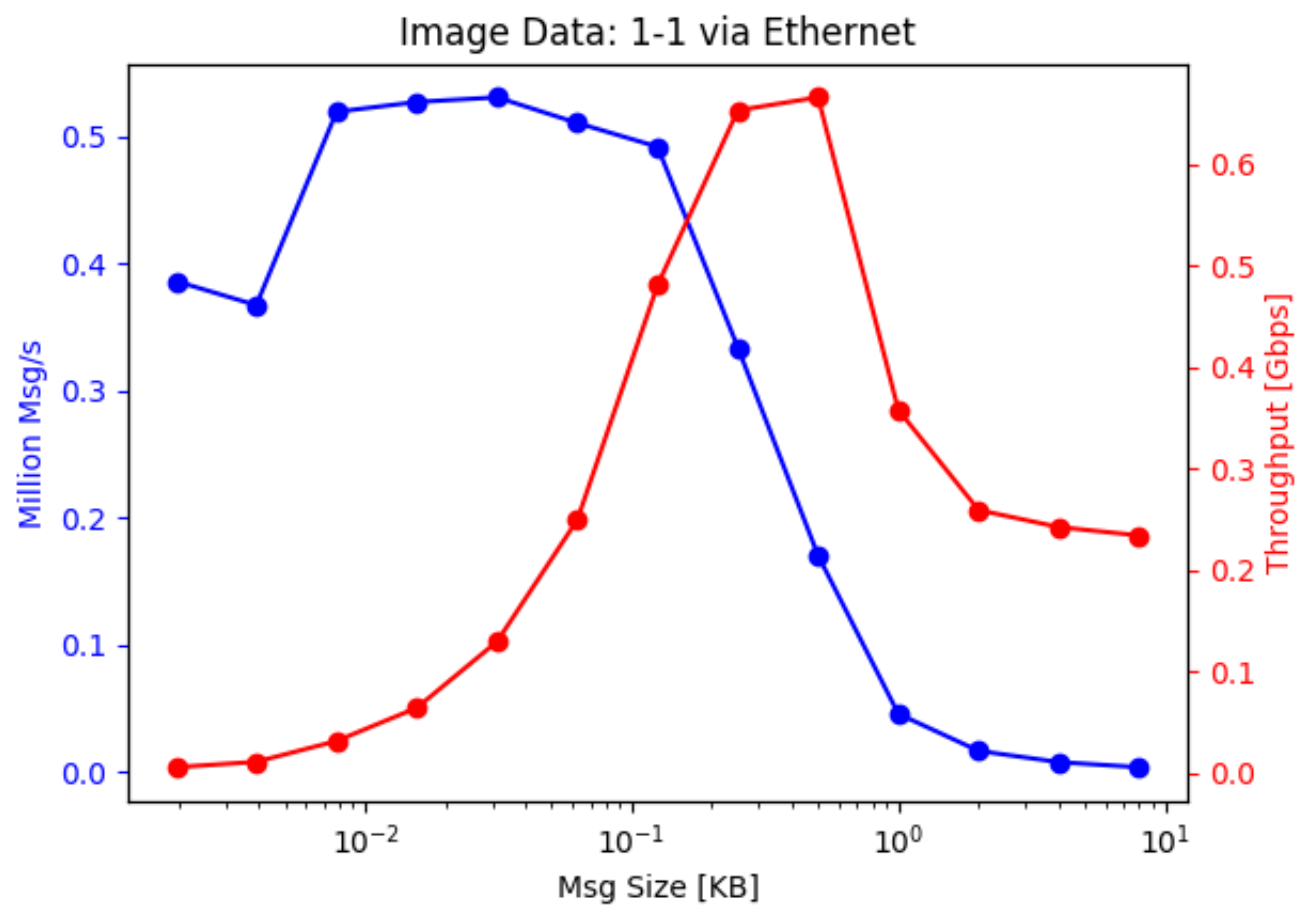

Image Data: 1-1 via Ethernet

Performance

- Image data over Ethernet

- Image data over Infiniband (1-1)

Performance

- Image data over Infiniband (1-1)

- Image data over Infiniband (2-2)

Image Data: 1-1 via Infiniband

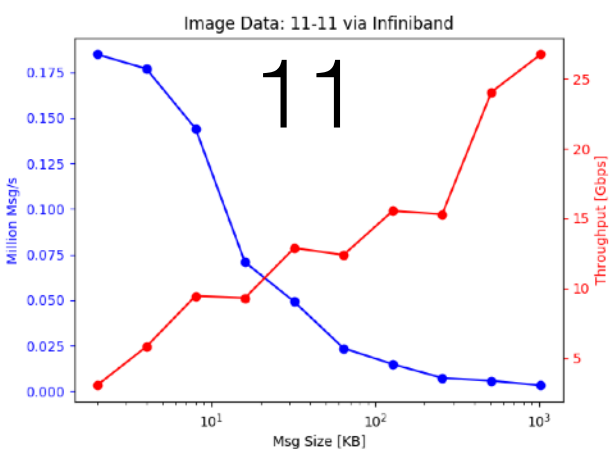

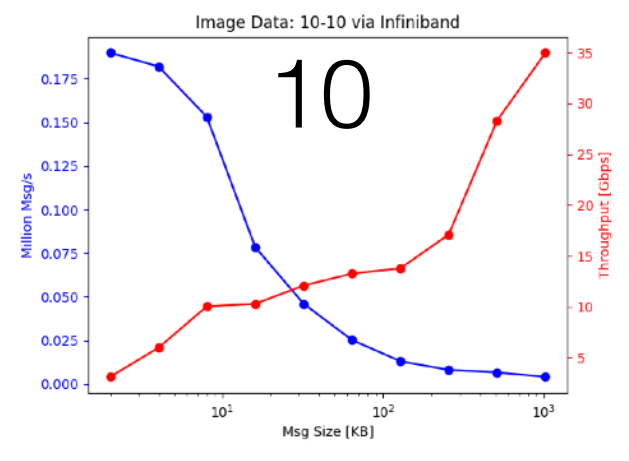

Image Data: 2-2 via Infiniband

Performance

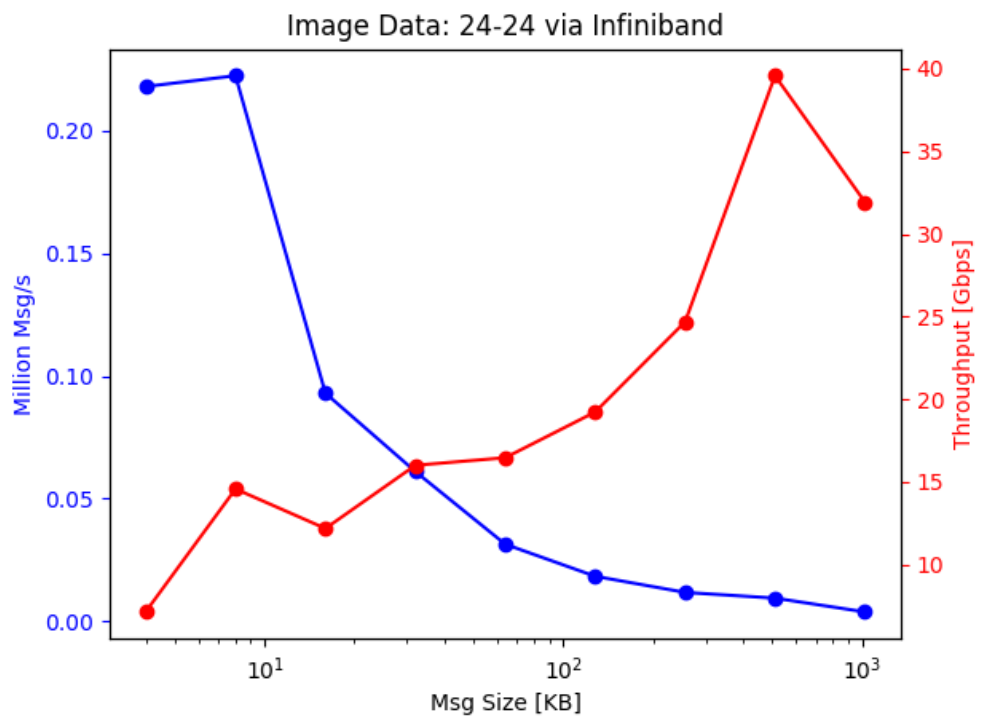

Performance

Oooops!

Performance

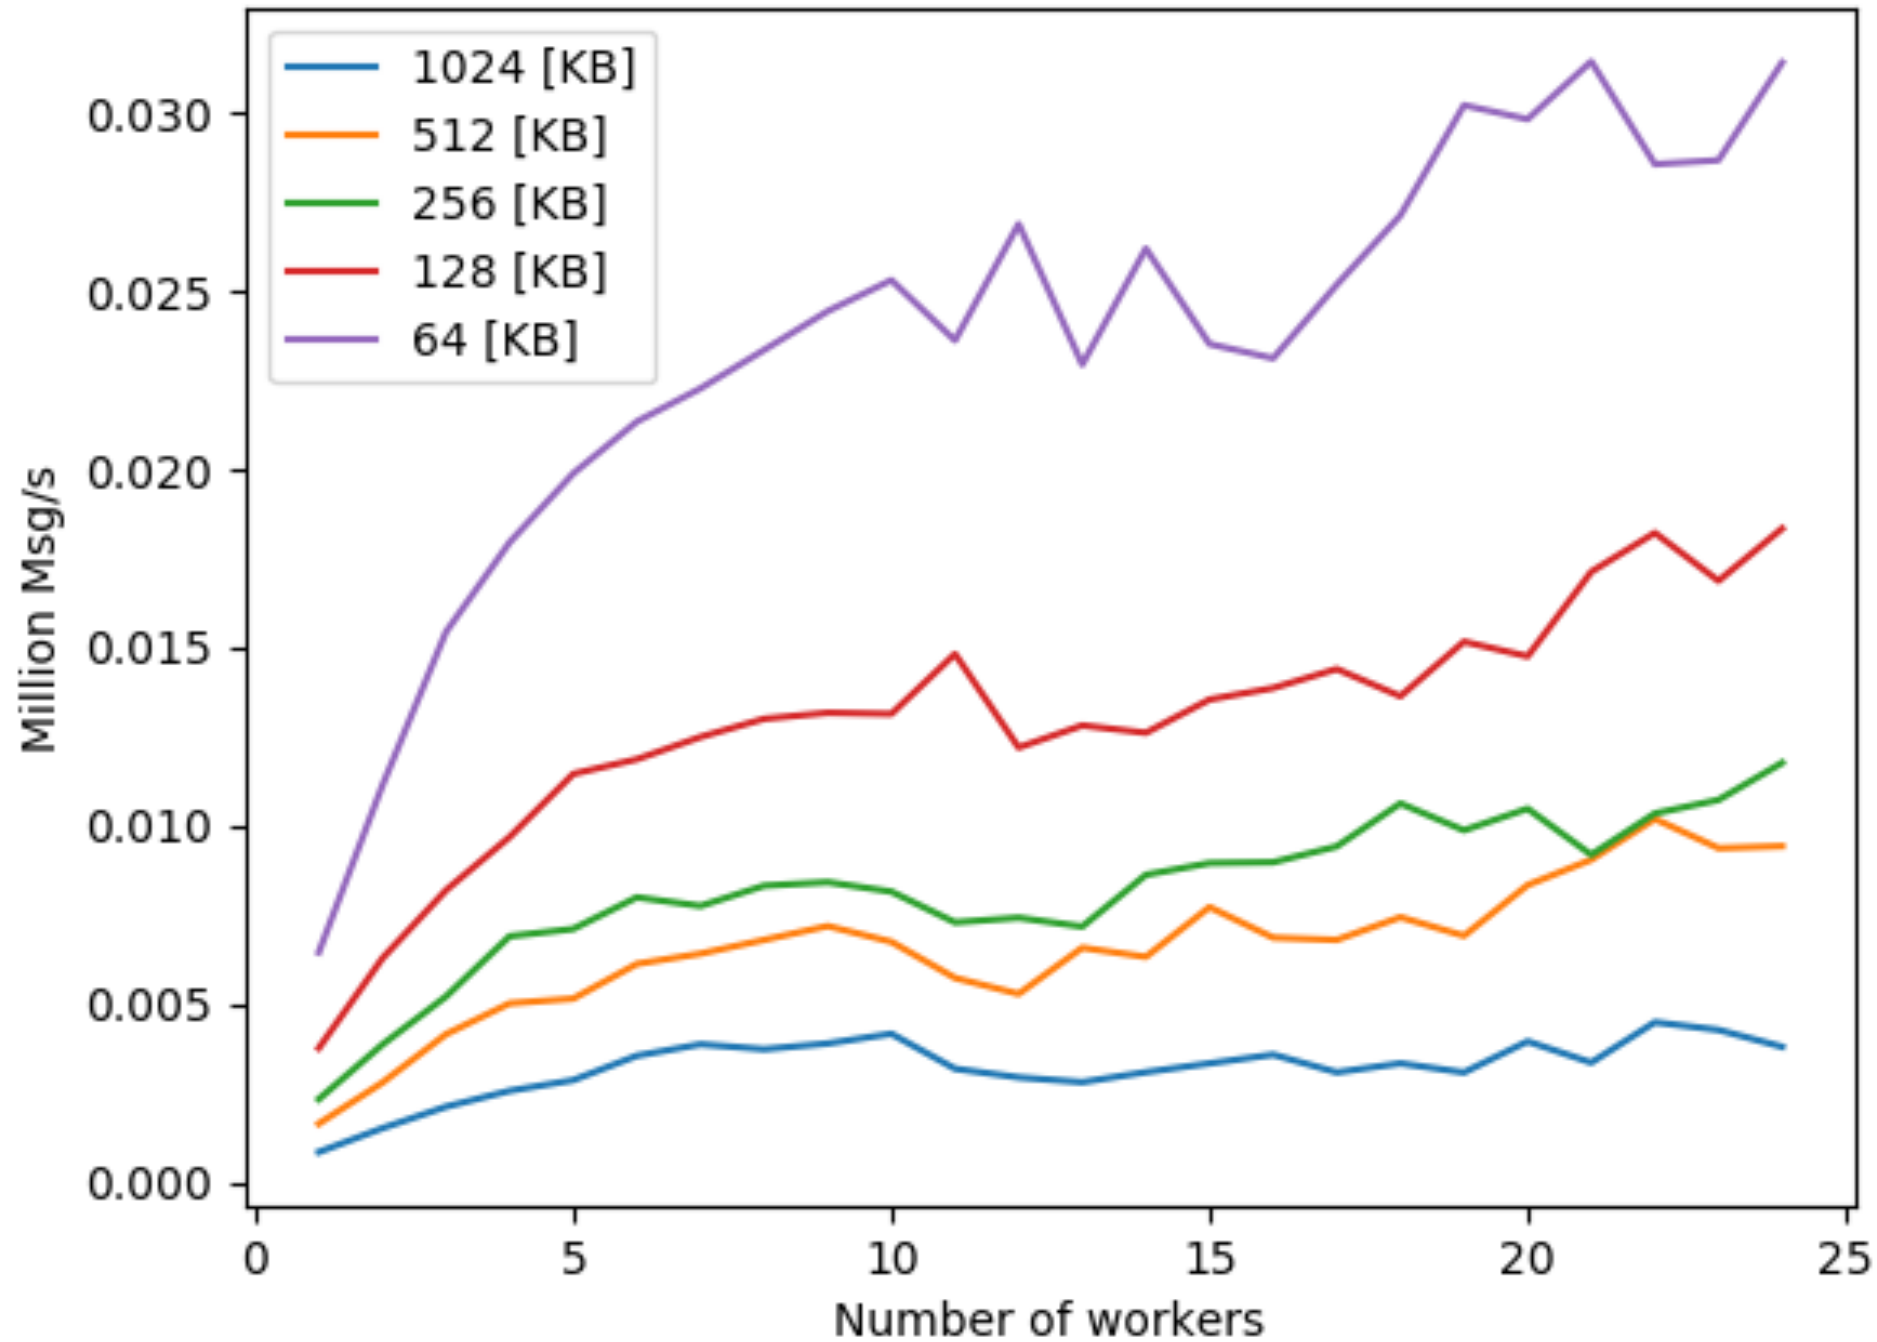

Performance

Throughput for different msg sizes (Infiniband)

Performance

Msg/s for different msg sizes (Infiniband)

Next Steps... since 2017

- **Test ACS integration (CentOS 7)**

- <https://github.com/LeoXDXp/ACSflix-Python>

- Does initial CORBA comm affect?

- Does a larger stack affect?

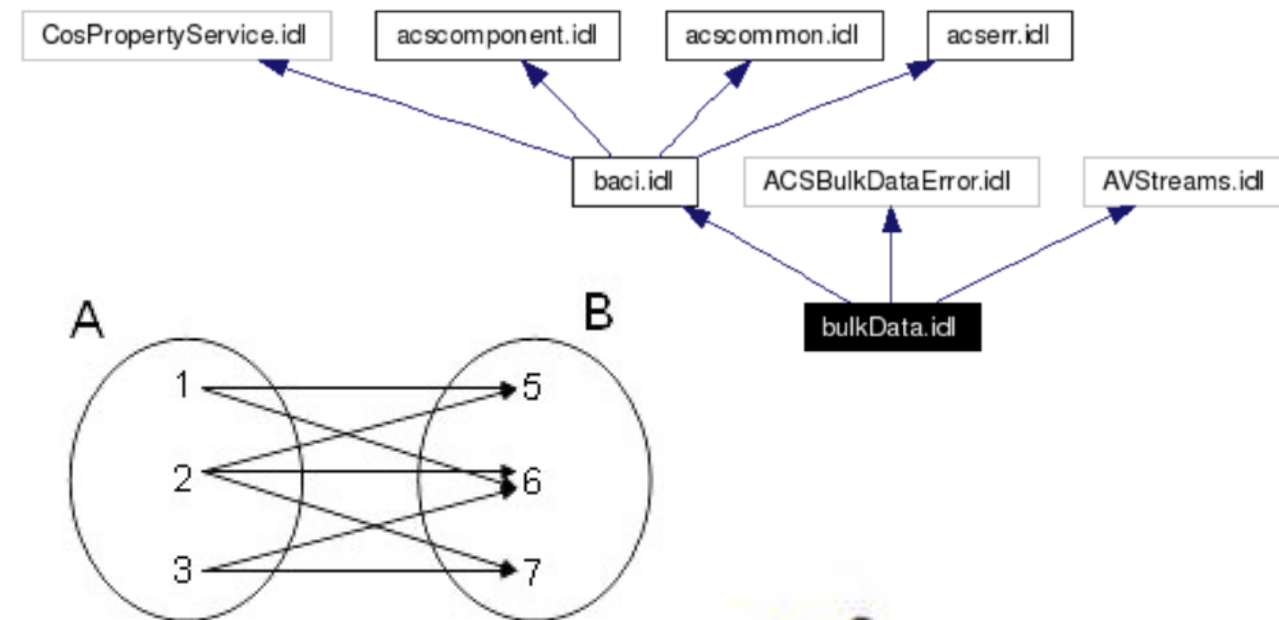

- **Agree mods to BDT IDL**

- Test non-symmetric simultaneous streams

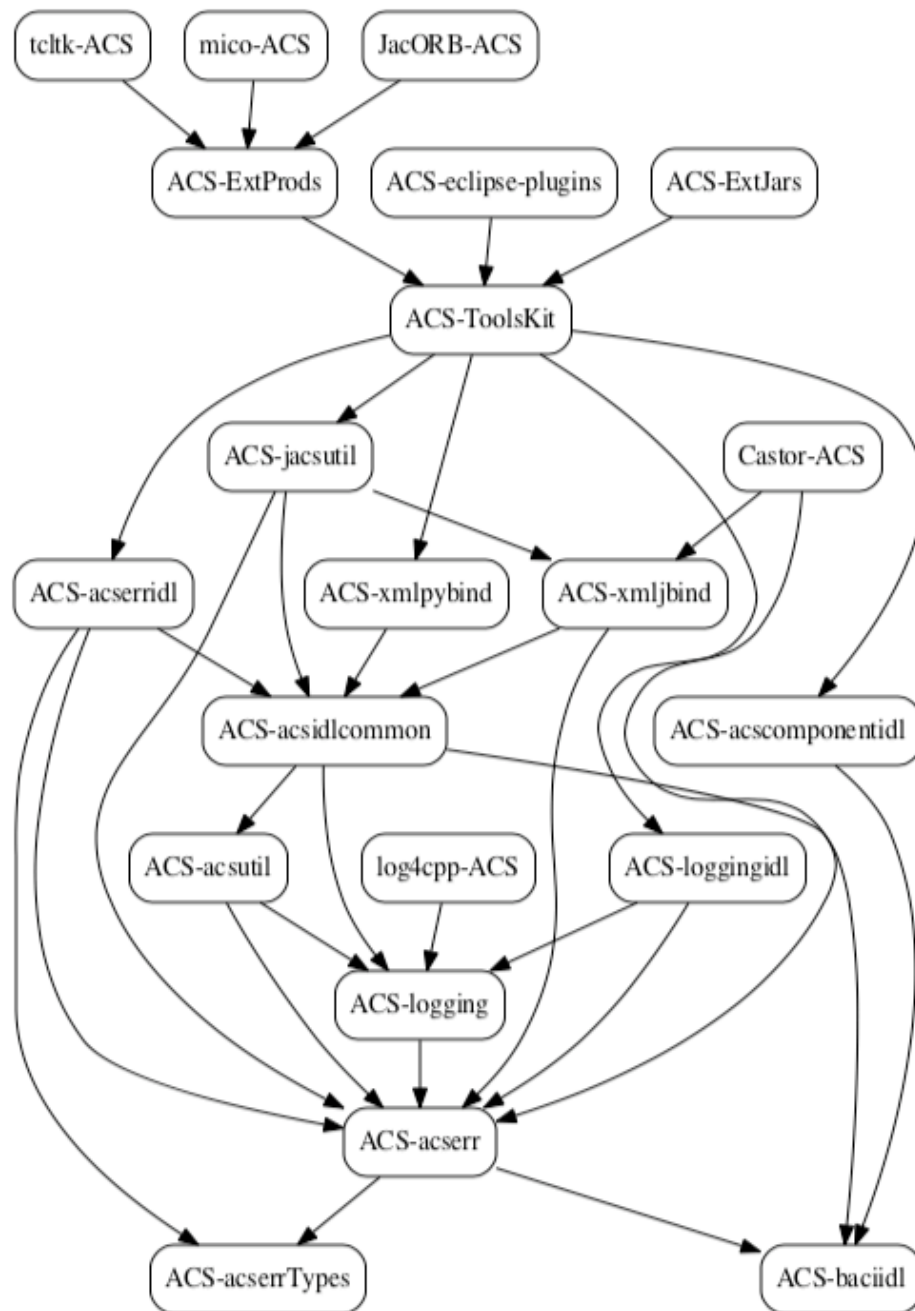

- Alternatives

- Apache Kafka

- HDF5 (hadoop)

Modular Packaging
