

Problem

After having configured ACS for my account, I get error accessing files. For example the file `.jacorb_properties` cannot be found

Solution

The `$ACSDATA` and other ACS directories are designed to be used from accounts in the same UNIX group ID of the account that did the installation. Normally, the installation is done by:

- ***user:*** `almamgr`
- ***group:*** `alma`

A number of files are installed therefore without "others" access rights.

If you see these problems check your group and file permissions.
