

Problem

I am editing a GUI with NetBeans, but I cannot connect properties to displayers

Solution

When you edit an ABeans GUI with [NetBeans](#) you connect ABeans Displayers to Properties by selecting the Property> item in the bean property sheet of the displayer (see the [Abeans Visual Composition Tutorial](#) and then selecting the Component you want to connect to.

In some cases, it seems that the component does not have any Property of the right type, even though there should be.

This seems to be a bug with NetBeans 3.x.

Please: save, exit NetBeans and start it again. Normally now you should be able to see all properties.
