This is the second ACS development to be used in Cycle 9. Below is the list of addressed tickets.

- Obsolescence management including changes originally planned for 2 releases
 - CORBA Vendor Implementation
 - omniORB was upgraded to latest version (4.2.4)
 - Java (15 dependencies) – Most notably
 - castor – Used for XML Schem binding with Java classes
 - prevayler – Used for Manager persistence and recoverability
 - antlr – JAR file now installed through Maven
 - Python (18 dependencies) – Most notably
 - Jedi – Added specific version for dependency used by ipython after unexpected issues
 - External Dependencies (5 dependencies)
 - astyle: Aligned to RHEL 8 version (as RHEL 7 doesn't provide the tool). Moved to Extpod
 - doxygen/graphviz: Aligned to RHEL 7 version. Not installed if already provided by O.S. packages. Fallback mechanism moved to ExtProd
 - vtd-xml: Upgraded to latest version and now installed through Maven. Moved to ExtProd
 - oAW: No longer installing as a module, now we use the version provided by ACS Eclipse installation
 - acsStartJava -addEclipseClasspath flag was added to automatically put the required dependencies in the classpath
 - Likewise, for compiling the special directive <jarname>_ECLIPSE=on was added for compilation to make use Eclipse's JAR files
- Accsim setMethod/setMethodIF now receives fully-compliant Python code blocks
 - This may break some implementations that used to write the return value on the last line without actually putting "return ..."
- Alternative XML Schema bindings for Java are being prepared using JAXB XJC technology
 - Both castor and jaxb bindings are created with the XSDBIND directive and are packaged in the same JAR file
 - If castor's code generated package is 'test.xx.yy', then xjc one is 'test.xx.yy.jaxb'
- Fix for CDB RDB plugin that enables simulation on devices transitioned through tmcdb-hardware-explorer
- Fix to TMCDB Explorer for NullPointerException when cancelling search dialogue

OS Support:

- The officially supported OS is the 64 bit version of "Red Hat Enterprise Linux Server release 7.6 (Maipo)"
 - The binary distribution of ACS (tarball) is made for this OS
 - We also successfully use its clone "CentOS 7.6"
 - For all machines the expected kernel is 3.10
- Unofficially, CentOS 8.2 has also been used successfully

The expected and actual versions of compilers, ORBs and various RPMs can be found by running the command `=acsConfigReport=`, both for required RPMs and for software shipped together with ACS. To get a rough overview before installing ACS, here are the most basic ones:

- Gcc: 4.8.5 RHEL 7.6
- Java: openjdk-11.0.4
- Python: 2.7.16 and 3.6.9
- ACE: 6.5.11

- TAO: 2.5.11
- JacORB: 3.9
- omniORB: 4.2.4

The operating system dependencies are:

- redhat-lsb-core
- ksh
- gcc
- gcc-c++
- gcc-fortran
- libX11-devel
- libffi-devel
- perl
- readline-devel
- bzip2
- bzip2-devel
- openssl-devel
- openldap-devel
- libxml2-devel
- freetype-devel
- libxslt-devel
- sqlite-devel
- expat-devel
- bison
- flex
- autoconf
- unzip
- dos2unix
- tcl-devel
- tk-devel
- procmail

There is a new requirement needed to replace cppunit (Since 2020DEC):

- cppunit-devel

There is a new requirement needed to replace doxygen and graphviz (Since 2021APR):

- doxygen
- graphviz
